

### Additional instructor's comments about your submission

ShowAll	<pre> public static void showAll(MyArrayList b[]) {     for (int i = 0; i&lt;4; i++)  System.out.println(b[i]); } </pre>	3	2
checkWin that uses isAllGuessed	<pre> public static boolean checkWin(MyArrayList b[]) {     boolean win=true;     for (int i = 0; i&lt;4; i++)     {         if(!b[i].isAllGuessed())             win=false;     }     return win; } </pre>	5	5
	Prompt the user for 2 row and 2 column values (for the first and second cards guessed).	3	3
	Use the mutator methods to alter the guessed Boolean values for the guessed cards.	2	2
	Use showAll to display the array list now displaying the guessed cards.	2	2
	If the guesses are unsuccessful, set the guessed property back to its original value.	2	2
	If successful, display a message to the user and check if the player is a winner.	3	3
